**MANAGEMENT DISCUSSION AND ANALYSIS REPORT****A) Overview of the Economy :****CHEMICAL INDUSTRY – STRUCTURE & DEVELOPMENT**

The Chemical Industry is critical for the economic development of any country, providing products and enabling technical solutions for virtually all sectors of the economy.

The global chemical industry is witnessing a gradual eastward shift. The industry is increasingly moving eastwards in line with the shift of its key consumer industries (e.g. automotive, electronics, etc.) to leverage greater manufacturing competitiveness of emerging Asian economies (especially India & China) and also to serve the increasing local demand. Substantial new capacities in the world are expected to come up in Asia and Europe. Operating profits in the sector have increased and many companies were able to push stronger cash flows down to the bottom line. However, the overall growth of the chemical sector was hampered by economic slowdown across US and Europe.

With Asia's growing contribution to the global chemical industry, India emerges as one of the focused destination for chemical companies worldwide. With the current size of approximately \$108 billion, the Indian chemical industry accounts for ~ 3% of the global chemical industry. Two distinct scenarios for the future emerge, based on how effectively the industry leverages its strengths and manages challenges. In the base case scenario, with current initiatives of Industry & Government, the Indian chemical industry can grow at 11% p.a. to reach size of \$224 billion by 2017. High end-use demand based on increasing per capita consumption, improved export competitiveness and resultant growth impact for each sub-sector of the chemical industry can also lead to an overall growth rate of over 15% p.a. and a size of \$290 billion by 2017 (~ 6% of global industry). This has a potential for further upside in the future considering India's increasing competitiveness in manufacturing.

The draft manufacturing policy recently approved by the Union Cabinet targets increasing the share of manufacturing in GDP to at least 25% by 2025 (from current 16%). These zones will enjoy fast track clearances from the Environment Ministry and State Pollution Boards, Special Policy Regimes, Tax Concessions and more favourable labour laws. Investments in manufacturing in the chemical sector are absolutely essential to ensure growth of the Indian chemical industry.

With rising concerns about climate change and depleting natural resources, focus on sustainability is another key trend impacting the global chemical industry. Chemical companies are increasingly working towards reducing energy intensity of their operations, minimizing effluent discharge, increasing the share of recyclable products in their portfolio and diversifying their raw material base to include bio-feedstock.

During last 6-8 months, the Indian Rupee had depreciated by over 22% vis-à-vis US Dollars. This has added to the competitive advantage of Indian Exporters while competing in global markets. Further the devaluation of Indian Rupee has also made imports dearer, thus the share of Indian manufactured goods in domestic consumption is expected to increase.

Your Company is a leading manufacturer of Speciality Chemicals with diversified end-uses into Agrochemicals, Pharmaceuticals, High Performance Polymers, Paints, Pigments, Printing Inks, Rubber Chemicals, Additives, Surfactants, Dyes, Flavours & Fragrances, Home & Personal Care applications, etc. Your Company makes continuous efforts to explore and innovate new products & processes in all segments.
